

Sahil Rathee

(+91) 9992396866 | sahil.artits.rathee@gmail.com | LinkedIn | Github | Leetcode

Senior Software Engineer & Distributed Systems Architect with a background in Physics. Specialized in high-scale infrastructure (K8s/Terraform/Helm), AI Orchestration (Multi-agent RAG), and low-latency backends (Go). Proven track record of scaling proprietary systems to millions of users and 100k+ downloads. Tenacious problem-solver with a "White Hat" security mindset.

Education

DDUC, University of Delhi

Bachelor's Degree in Science (Major: Computer Science)

2018 – 2021

Core Skills

- Specialty: AI Orchestration, Multi-agent Management, Distributed Systems Architecture
- Languages: Go (Primary), Python, Dart/Flutter, Kotlin, TypeScript, GraphQL
- Infrastructure: Kubernetes, Terraform, Helm, Ansible, AWS, GCP, Docker, CI/CD
- Systems: Microservices, Real-time Event Streaming, Serverless, ns-latency Optimization
- Databases: PostgreSQL, Redis, MongoDB, Amazon Neptune, OpenSearch
- Security (Night-Forte): White Hat Hacking, Kali Linux, Networking, Penetration Testing

Relevant Experience

Software Engineer @ GymWise India Private Limited from Mar 2024 to Dec 2025

- Architected and led the development of cloud infrastructure for a fitness ecosystem with 100k+ downloads, ensuring zero-drift consistency via Terraform, Helm, and Ansible.
- Pioneered the transition to AI Orchestration, implementing multi-agent RAG systems to manage complex user workflows and automated coaching modules.
- Spearheaded the design of container orchestration solutions (K8s), optimizing system performance for high-concurrency real-time events.
- Directed the technical strategy for scalable microservices in Go, reducing latency for core business logic significantly.
- Optimized the Android/iOS CI/CD pipelines, increasing deployment velocity and maintaining high availability across 100k+ active nodes.

Full Stack Engineer @ Bighit from Nov 2022 to Mar 2024

- Led the redevelopment of tech infrastructure for a major social/sports platform, achieving an 80% reduction in app size and 60% increase in server efficiency via AWS IaC.
- Designed advanced location tracking and dynamic chat modules for high-engagement user bases.
- Optimized AWS services including Amazon Neptune and OpenSearch clusters, managing real-time data synchronization for millions of events.
- Managed and optimized high-traffic servers, reducing API latency by 80% through refined load balancing and database query optimization.

Full Stack Developer @ Gamix Labs from Mar 2022 to Oct 2022

- Developed high-performance gaming servers in Node.js with event-streaming services for real-time multiplayer interactions.
- Deployed PWA gaming websites and HTML5 games with clients like OneFC and Bombay Play.
- Adopted TDD and advanced facial/voice recognition for secure authentication platforms.

Personal Specializations (Side Quests)

- White Hat Security: Active practitioner in ethical hacking and network security using Kali Linux, Wireshark, and Nmap.
- Competitive Gaming: Applying strategy and problem-solving mindsets from high-level gaming to complex system architectures.
- Physics-Driven Engineering: Applying thermodynamic principles to manage system entropy and optimize resource distribution.
