Backend & Infrastructure Engineer (Go, Python, Kubernetes) -- 5+ years building distributed systems, cloud infrastructure and real-time event pipelines. I architect and run production systems end-to-end: from zero-driven Terraform/Ansible IaC to container orchestration, CI/CD, and AI-agent orchestration. B.Sc. Computer Science with a physics-first systems mindset.

## CORE SKILLS

- Languages: Go (primary), Python, TypeScript, Kotlin, Dart/Flutter, GraphQL
- Infrastructure: Kubernetes, Terraform, Helm, Ansible, Docker, AWS, GCP, CI/CD (Jenkins, GitHub Actions)
- Systems: Microservices, Real-time Event Streaming (NATS, Kafka, RabbitMQ), Serverless, Low-latency API optimization
- Databases: PostgreSQL, Redis, MongoDB, OpenSearch, Qdrant (vectors)
- AI/Orchestration: Multi-agent RAG, Agentic Workflows, Vector Databases, LLM application backends
- Platform Engineering: Zero-dependency deploy (ARM/single-node), Blue/Green rollouts, OTA update pipelines, Cloudflare Workers
- Founded and run an ecosystem of 28 production applications (Android + web) on a single always-free ARM cloud node; designed the entire platform to run at \$0 monthly infrastructure cost (storage, compute and networking budget-enforced).
- Designed Chart-Forensics, a high-frequency trading intelligence engine in Go/Python on NATS JetStream + Qdrant vector search with a risk-gated order execution queue, MT5 bridge and account-sync pipelines.
- Built Cardiodictyon (Meeseeks) -- an autonomous multi-agent RAG + code-generation layer (Go, Python, FastAPI) deployed at [meeseeks.infortts.site](https://meeseeks.infortts.site).
- Authored the Jenkins -> Hugging Face CDN pipeline that builds and ships OTA patches and APK releases for all 28 apps from a single pipeline.
- Consolidated SuperOver, Halftime and a C++ (Drogon) SportsEngine into one monorepo ("Stadium") orchestrated with Docker Compose for local simulation.
- Built Khata, a billing + GST system for Indian sellers on Next.js 14 + Drizzle, deployed serverless to Cloudflare Pages/Workers.
- Managed Shadow Labs (Hono/Node + Next.js + Prisma + PostgreSQL e-commerce) and Roost (Go GraphQL + Flutter property management) infrastructure.
- Google Play (100K+ downloads): <https://play.google.com/store/apps/details?id=com.gymwise.android>
- Led cloud infrastructure for a 100K+ download fitness ecosystem: Terraform, Helm and Ansible with zero-drift consistency; container orchestration and high-concurrency real-time APIs.
- Drove the AI-orchestration initiative: multi-agent RAG systems powering automated coaching modules and workflow management.
- Optimized Android/iOS CI/CD for 100K+ active nodes, raising deployment velocity and availability.
- Google Play: <https://play.google.com/store/apps/details?id=com.agamtech.bighit.fans>
- Redeveloped tech infrastructure for a social/sports platform: ~80% app-size reduction and ~60% server-efficiency gain via AWS IaC.
- Built location tracking + dynamic chat modules; optimized Amazon Neptune/OpenSearch and real-time data sync for millions of events.
- Cut API latency ~80% through load balancing and query optimization.
- Built gaming servers (Node.js) with event-streaming for real-time multiplayer; PWA + HTML5 games for OneFC and Bombay Play: <https://gamixlabs.com/dinomons.html>
- Introduced TDD and facial/voice recognition for secure authentication platforms.

## EDUCATION

DDUC, University of Delhi -- B.Sc., Computer Science -- 2018-2021
